PREMIER SELECT PRODUCTS

PREMIER SELECT PRODUCTS: La Belle produces products that are intended as a nutritional boost and colostrum supplement to an animal's diet. Backed by more than 25 years experience & success, La Belle has created the **Premier Select** line of products that are formulated for specific animal species. These formulas are produced using the highest quality of bovine colostrum powder, enriched with vitamins, minerals, and probiotics for superior newborn nutrition. **Premier Select** is extremely effective in developing a healthy animal when used as a supplement, or to replace mother's colostrum when not available or quality is uncertain. The active ingredients in these enriched formulas include bovine colostrum; egg protein; vitamins A,C, D, and E, as well as vitamin B complex; minerals (Fe, Zn, Mn, C, Se, and Co); and probiotics (Lactobcillus spp., Streptococcus diacetylactis, Bifidobacterium bifidum). La Belle's **Premier Select** product line will be financially beneficial to your company and the animal lovers who utilize them.

the worldwide leader in colostrum

PREMIER SELECT ENRICHED FORMULAS

KID FORMULA should be fed for the first 7 days after birth. Protein, fiber, vitamins, and minerals are essential for optimal growth and development. Kid formula contains no copper, since this mineral is abundant in the typical goat diet and can exceed healthy levels.

LAMB FORMULA Lambs are highly vulnerable at birth, and adequate nutrition - especially protein - is crucial to survival and long-term health. Lamb Formula should be fed for the first 7 days after birth. The protein and growth factors in colostrum, along with added vitamins and minerals provided in Premier Select Lamb Formula, support natural defenses and give baby lambs a needed boost.

HORSE FORMULA A nutritional supplement specifically tailored to neonatal foals, Premier Select Horse Formula is a great product to keep on hand. An equine premix of vitamins and minerals is included along with egg protein powder as an additional nutritional support for the newborn or mature horse.

PORCINE FORMULA Adequate colostrum intake and proper weight gain until weaning are essential to early piglet development and predictive of long-term health. Porcine Formula is designed to meet the colostrum needs of piglets when colostrum is not available, as well as to provide excellent source of supplemental protein throughout adulthood.

ALPACA/LLAMA FORMULA Proper nutrition, quality of colostrum, cleanliness of birthing environment, and birthing weight at parturition are all factors that affect whether your alpaca and llama crias will survive. Additional vitamins and minerals, including selenium, have been added to meet the specific dietary needs of these unique animals, especially when the newborn cria will not suckle.

CANINE FORMULA Is intended as a protein, vitamin and mineral supplement for puppies and adult dogs alike. High-quality protein, calcium, vitamins and minerals are often limited in commercial diets, but Premier Select Canine Formula can fill the gaps. Colostrum supports natural defenses and digestion. Egg protein increases coat shine and was added with breeders and show dogs in mind.

FELINE FORMULA Colostrum and egg proteins come together in Premier Select Feline Formulas to support growth and development, natural defenses, and digestion, as well as to promote healthy skin and a shiny appearance from kitten to cat. Feline Formula has a natural milk flavor that cats love.

DEER FORMULAS First Catch and First Fawn Formulas are highly-concentrated bovine colostrum products for newborn fawns. First-Catch Paste should be used for the initial feeding to all fawns when tagged and released back into the wild. If bottle feeding, supplementation should be continued with First-Fawn Colostrum Powder.
